The highly interactive and participatory workshop invites participants to engage in progressive conversations about the local relevance of the SDGs based on a set of SDGs Community Implementation Flashcards containing more than 200 questions structured into the four dimensions of Gaia Education’s whole systems approach to sustainability.

The SDGs Flashcards seek to raise awareness of the SDGs among local and national actors. It also aims to create an enabling environment for the localisation process, to support local ownership and to ensure SDG integration in sub-national strategies and plans.

The Dual Purpose of the Training of Multipliers
- To initiate community focused conversations about local SDG implementation
- To train people to become multipliers of such conversations

A well-structured workshop script allows participant to replicate the workshop format of small and large-group work and peer-to-peer learning in their government department, at the university, in schools, businesses and community groups in their regions.
