**CREATING COMPOST**

Create a circle of dead trees

Attach linen/cloth to the circle of dead trees to create container for compost

The finished container for compost looks like this

Begin by installing a layer of dried plant material such as straw or dead leaves. It must be between 20 and 30 cm high.

Add a layer of fresh plant material "weeds", if possible without seeds.

Water layer to wet them because the compost pile should be kept moist for the duration of maturation.

You can add a layer of bark and small pieces of wood preferably crushed.

If you have manure, dispose of it in fairly thin layer

Also interleave organic waste from your kitchen between the layers.

Repeat layers until compost container is full. Remember to keep moist for the duration of maturation.

Finally, finish by adding a layer of straw, leaves, various dry plant debris or earth, to run off too much rain.

Composition summary

- Dried plant material
- Fresh plant material
- Bark and wood
- Manure
- Kitchen waste
- Straw, leaves and soil
